The Glutathione Corporation Beacon

Announcing a New Powerful Product

Extreme Performance™ Premium Ultrathione® Brand of Glutathione

1. For individuals engaged in professional sports, or heavy exercise such as: weight training 3-4 times/week or more; extensive aerobics, running 10 miles/week or more, or aerobic exercise averaging 45 minutes or more daily.
2. For long-haul truck drivers.
3. For long-distance airline personnel.
4. For long-distance air travelers.
5. For long, highly focused activities, as in air traffic controllers, emergency rescue workers, “first responders”, students, working mothers, NASA astronauts, trial attorneys, and others in whom the nervous system, the musculo-skeletal and/or the immune system may be overtaxed.
6. For people who may have experienced environmental toxins, including complex organic compounds, heavy metals, and radiologically active materials from industrial sites. One of the normal functions of the glutathione that we all produce in our bodies, daily, is to serve as a detoxifier.

Extreme Performance™ is available in an encapsulated, packeted dosage form produced with all-FDA approved materials, identical in design to the other encapsulated, packeted products of TGC. Each packet contains three (3) 500 milligram capsules of Ultrathione® Glutathione, totaling 1,500 milligrams of glutathione, i.e. 1.5 grams. In addition, a ruby-colored, soft gel capsule provides the only pure, crystalline, stabilized beta carotene and pure, stabilized vitamin E, in the world

This product requires a “Lead In” period:

Days 1 through 3: Use 1 white capsule per day (take the Ruby Soft Gel on Day 1). **500mg/day**

Days 4 through 6: Use the above dosage twice a day, at least 4 hours apart (take the Ruby Soft Gel on Day 4). **500mg/am and 500mg/pm**

Days 7 and Afterwards: Use one to two packets per day, separated by 6-8 hours. **1,500mg/am in one packet, and, if desired, 1,500mg/pm** in the second packet of the day. Two doses provide 3,000mg.

ALSO IN A CONVENIENT, ECONOMICAL POWDER DOSAGE FORM

Extreme Performance™ is also available in a bottle that contains 50 grams of the identical, stabilized, absorbable Ultrathione® glutathione (“**GSH**”) as in APC’s encapsulated GSH. Scientifically Pure and Safe. This is in its pre-encapsulation, powder form, taken out just before we feed it into our high speed encapsulation system.

This form of GSH, in Extreme Performance™, dissolves readily in water, juices, “smoothies”, and *cold* soups. The taste is citrus-like. Most individuals prefer the ease, availability and resulting taste of dissolving GSH in juice, like tomato. Personal tastes may vary. **It’s great no matter how you take it, so long as the fluid is not hot.**

The non encapsulated powder is convenient for: (i) individuals who do not readily swallow capsules, and (ii) for individuals whose personal beliefs preclude use of gelatin from animal sources.

The powder form also requires a “Lead In” Period.

These are the equivalent measures:

One GSH 500 milligram capsule = one quarter of a teaspoon, = one third of a
when slightly compacted in a plastic measuring tube, as available in drug stores regular, household
teaspoon

Days 1 through 3: Use ¼ tsp, compacted powder in a measuring tube, or 1/3 tsp, in a regular household teaspoon per day
(500mg/day)

Days 4 through 6 Use the above dosage twice a day, at least four hours apart
(500mg/am; 500mg/pm)

Days 7 and afterwards: Use ¾ tsp, compacted powder in a measuring tube, or one tsp in a regular household teaspoon, once or twice per day, separated by 6-8 hours. **1,500mg/am and if desired, 1,500mg/pm** in the second dose of the day. Two doses provide 3,000mg
