

Glutathione the Master of Antioxidants

Antioxidant Pharmaceuticals Corporation (APC) is a scientific research company whose focus on health begins with the smallest of the body's building blocks: the atoms and molecules that create human cells. Because virtually every disease known to medicine, as well as the aging process itself, can be traced to some form of molecular or cellular dysfunction, our goal at APC is to maintain healthy molecules and cells.

Without question, the single greatest threat to cellular and Molecular health is a process called oxidation. Scientifically speaking, oxidation occurs when incomplete atoms – that are missing one of their electrons – take electrons from healthy or complete atoms. Antioxidants stem this process because they have extra electrons that can be given to incomplete atoms, making them whole and healthy.

One antioxidant, GSH or Glutathione, is recognized as the Master Antioxidant. Unlike simple antioxidants such as ascorbic acid (Vitamin C), alpha tocopherol (Vitamin E) and the carotenes – all of which come from food sources – GSH is produced by the body and has more than 100 times the antioxidizing capability of simple antioxidants.

At APC, we produce and sell Glutathione (GSH) supplements as well as co-factor vitamins and minerals.

Our products are the only GSH formulations on the Market that are scientifically stabilized and have been proven effective in raising GSH levels inside cells in the human body.

In FDA clinical trials conducted by Thyogen Pharmaceuticals Inc., our formula had an absorption rate of 75% to 80%.

Today, some makers of nutritional supplements are beginning to offer generic Glutathione supplements. Their formulations have not been tested or proven efficacious and we do not wish to be confused with their products. For that reason, we market our products under the name Ultrathione. The Ultrathione brand denotes stability, absorbability, and pharmaceutical grade of purity.

The APC Purity Pledge:

1. All APC products contain only pure active ingredients.
2. All APC products are free of impurities, lubricants, binders, fillers, gums, rancid acids, starches, sodium salts, artificial colors, artificial flavorings, additives or excipients.

3. All APC products are uniquely sealed under pure, sterile dry nitrogen for purity and stability.

Our goal at APC is to keep your GSH levels normative. How quickly you exhaust your body's natural daily production of GSH is the determining factor in our recommendation. If you lead a relatively normal life. Our Ultrathione Performance should help you maintain proper GSH levels. If you lead a fairly active or stressful life, we recommend our Ultrathione health Pack or Ultrathione 500. If you are involved in heavy aerobic or athletic training, we suggest you try our Ultrathione 1000 Sports.

Other oxidative stresses such as viral infections (herpes, hepatitis, flu and HIV), dietary fat beyond 15% of calories, tobacco smoke, alcohol, acetaminophen drugs, recreational drugs, emotional stress and sun-bathing are also factors in determining proper supplement levels. Please feel free to e-mail (info@thyogen.com) or call (1-800-362-8673) with any questions you have about which of our products is best for you.
